

# PENREN this Week

September 22, 2003

## Hurricane Isabel Update

*The Intake/Outfall Screenhouse (top) was completely flooded when Isabel caused flooding in the Boundary Channel Lagoon (right)*

Thorough preparation by crews on **PENREN's** outdoor projects helped to ensure that Isabel's wrath had little or no effect on schedule.

At the **Intake/Outfall** project, Pipe jacking is scheduled to resume on Monday

Crews on the **Roads and Grounds Projects** worked weekend hours to make up for delays caused by the storm.

At the **Pentagon Athletic Center**, most of the work is taking place inside of the completed concrete structure, minimizing any weather-related delays.

Most importantly, there were no injuries or lost-time accidents as a result of Hurricane Isabel.

## Metro Entrance Facility Receives LEED™ Certification

*The benches and structures on the Pentagon bus loop utilized recycled and renewable building materials for construction.*

The Pentagon Metro Entrance Facility was recently given a Leadership in Energy and Environmental Design (LEED™) certification by the U.S. Green Building Council. This is the first PENREN Project to receive the certification.

The US Green Building Council developed LEED™, the most comprehensive voluntary system for designing, constructing and operating green buildings. It is currently the only industry standard available to score construction projects on sustainable characteristics. The rating system provides guidelines and standards for building & managing resource (and energy) efficient buildings.

**For more information on Sustainable Design visit the PENREN Web site:**
